

ASX Announcement

15 May 2023

Investor Presentation and Webcast – Resources Rising Stars Conference

7am AWST, Tuesday 16 May 2023

Chalice Mining Limited ("Chalice" or "the Company", ASX: CHN | OTCQB: CGMLF) advises that Chris MacKinnon, Chief Financial Officer, will provide an Investor Presentation at the Resources Rising Stars Gold Coast Conference at **9.00am (AEST) / 7.00am (AWST), Tuesday, 16 May 2023**.

A copy of the presentation is attached and is also available on the Company's website.

Webcast

Shareholders and investors who wish to listen to the live webcast can register via the link below:

https://www.bigmarker.com/series/resources-rising-stars-2023-/series_summit

Please note that it is recommended that you log in at least five minutes before the scheduled commencement time.

Participants can also register to attend in person at www.rrsinvestor.com

Authorised for release by the Disclosure Committee.

Forward looking statements and competent person(s) disclosure

This presentation does not provide investment or financial product advice and does not include all available information on Chalice Mining Limited and should not be used in isolation as a guide to investing in the Company. This presentation is not a prospectus, disclosure document or other offering document under Australian law or under any other law. It is provided for information purposes and is not an invitation nor offer of shares or recommendation for subscription, purchase or sale in any jurisdiction. This presentation does not purport to contain all the information that a prospective investor may require in connection with any potential investment in the Company. Any potential investor should also refer to Chalice Mining Limited's Annual Reports, ASX/OTCQB releases, and take independent professional advice before considering investing in the Company. For further information about Chalice Mining Limited, visit our website at chalicemining.com

Forward-Looking Statement

This presentation may contain forward-looking statements and forward information, including forward looking statements within the meaning of the United States Private Securities Litigation Reform Act of 1995 (collectively, forward-looking statements). These forward-looking statements are made as of the date of this announcement and Chalice Mining Limited (the Company) does not intend, and does not assume any obligation, to update these forward-looking statements. Forward-looking statements relate to future events or future performance and reflect Company management's expectations or beliefs regarding future events and include, but are not limited to: the impact of the discovery on the Julimar Project's capital payback; the Company's strategy and objectives; the realisation of mineral resource estimates; the likelihood of further exploration success; the timing of planned exploration and study activities on the Company's projects; mineral processing strategy; access to sites for planned drilling activities; and the success of future potential mining operations and the timing of the receipt of exploration results. In certain cases, forward-looking statements can be identified by the use of words such as, "commitment" or "committed", "considered", "could", "estimate", "expected", "for", "further", "future", "goal", "indicates", "is", "likely", "may", "needs", "open", "optional", "plan" or "planned", "points", "possible", "potential", "promising", "strategy", "upside", "will" or variations of such words and phrases or statements that certain actions, events or results may, could, would, might or will be taken, occur or be achieved or the negative of these terms or comparable terminology. By their very nature forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of the Company to be materially different from any future results, performance or achievements expressed or implied by the forward-looking statements. Such factors may include, among others, risks related to actual results of current or planned exploration activities; whether geophysical and geochemical anomalies are related to economic mineralisation or some other feature; whether visually identified mineralisation is confirmed by laboratory assays; obtaining appropriate approvals to undertake exploration activities; metal grades being realised; metallurgical recovery rates being realised; results of planned metallurgical test work including results from other zones not tested yet, scaling up to commercial operations; changes in project parameters as plans continue to be refined; changes in exploration programs and study programs and budgets based upon the results and outcomes, successful completion of the strategic partnering process; changes in commodity prices; economic conditions; political and social risks, accidents, labour disputes and other risks of the mining industry; delays or difficulty in obtaining governmental approvals, necessary licences, permits or financing to undertake future mining development activities; changes to the regulatory framework within which Chalice operates or may in the future; movements in the share price of investments and the timing and proceeds realised on future disposals of investments as well as those factors detailed from time to time in the Company's interim and annual financial statements, all of which are filed and available for review on the ASX at asx.com.au and OTC Markets at otcm Markets.com. Although the Company has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. There can be no assurance that forward-looking statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements.

Authorisation

This presentation has been authorised for release by the Disclosure Committee.

Disclaimer

Whilst care has been exercised in preparing and presenting this presentation, to the maximum extent permitted by law, the Company and its representatives:

- Make no representation, warranty or undertaking, express or implied, as to the adequacy, accuracy, completeness or reasonableness of this Presentation;
- Accept no responsibility or liability as to the adequacy, accuracy, completeness or reasonableness of this Presentation; and
- Accept no responsibility for any errors or omissions from this Presentation.

Reliance on Third Party Information

The views expressed in this presentation contain information that has been derived from third party sources that have not been independently verified. No representation or warranty is made as to the accuracy, completeness or reliability of the information. This presentation should not be relied upon as a recommendation or forecast by Chalice.

Mineral Resources Reporting Requirements

As an Australian Company with securities quoted on the Australian Securities Exchange (ASX), Chalice is subject to Australian disclosure requirements and standards, including the requirements of the Corporations Act 2001 and the ASX. Investors should note that it is a requirement of the ASX listing rules that the reporting of mineral resources in Australia is in accordance with the JORC Code and that Chalice's mineral resource estimates comply with the JORC Code. The requirements of the JORC Code differ in certain material respects from the disclosure requirements of United States securities laws. The terms used in this announcement are as defined in the JORC Code. The definitions of these terms differ from the definitions of such terms for purposes of the disclosure requirements in the United States.

Competent Persons Statement

The information in this presentation that relates to previously reported exploration results for the Julimar Project is extracted from the following ASX announcements:

- "High-grade nickel-copper-palladium sulphide intersected at Julimar Project in WA", 23 March 2020
- "New Mineralised Zone Intersected at Dampier Target", 7 July 2022
- "Seismic identifies potential 1.6km extension of Gonneville", 6 September 2022
- "Major northern extension of Gonneville Intrusion confirmed", 19 October 2022
- "Outstanding wide high-grade intersections north of Gonneville", 23 November 2022
- "Promising new sulphide mineralisation at the Hooley Prospect", 8 December 2022
- "Julimar flowsheet development and scoping update", 13 December 2022
- "Further early-stage exploration success north of Gonneville", 3 May 2023

The information in this presentation that relates to Mineral Resources has been extracted from the ASX announcement titled:

- "Gonneville Resource increases by approx. 50% to 3Mt NiEq", 28 March 2023.

The above announcements are available to view on the Company's website at chalicemining.com

The Company confirms that it is not aware of any new information or data that materially affects the information included in the original market announcements and, in the case of Mineral Resources, that all material assumptions and technical parameters underpinning the estimates in the original release continue to apply and have not materially changed. The Company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the relevant original market announcements. Refer to the attached Appendices for further information on the Mineral Resource Estimate and metal equivalents.

Company overview

A **globally recognised** name in minerals exploration

A team with a track record of **finding mines (Flying Fox, Spotted Quoll, Tropicana)** and rewarding shareholders

High-performance, results driven culture that is values driven

Our purpose – to find the metals needed to decarbonise the world (the *green metals*)

Our aspiration – to create a world class, multi-district green metals province in the West Yilgarn Province

Chalice is a **leading ASX200 green metals explorer-developer** with a track record of creating shareholder value

Our Achievements

- **~4,600% total return to shareholders** since Julimar discovery in March 2020
- World class Julimar Ni-Cu-PGE discovery recognised with PDAC **Thayer Lindsay Award (2023)** and AMEC **Prospector of the Year Award (2022)**
- Chalice recognised as RIU **Craig Oliver Award (2021)** MNN **Explorer of the Year (2021)** and D&D **Emerging Company of the Year (2021)**

Note: Arctis Global disclosed a long equity derivative position of 46,728,282 shares on 10 Nov 2022.

Julimar – a major new polymetallic critical minerals project in Western Australia

A tier-1 scale magmatic sulphide Resource:

560Mt @ ~0.54% NiEq or ~1.7g/t PdEq¹ (~55% M&I / ~45% Inferred)

16Moz 3E²

860kt Ni

520kt Cu

83kt Co

contained

equivalent to ~3.0Mt NiEq or ~30Moz PdEq

Includes a higher-grade (>0.6% NiEq OP + UG) sulphide component:

120Mt @ ~0.9% NiEq or ~2.7g/t PdEq, extending from 30m to 800m+ (open)

A **strategic, large-scale** Resource with rare mix of critical minerals in sulphide mineralogy

Green metals at Julimar are **essential for decarbonisation** technologies like batteries, electric vehicles and hydrogen

100% owned by Chalice and located in WA, one of the **world's most attractive mining jurisdictions**

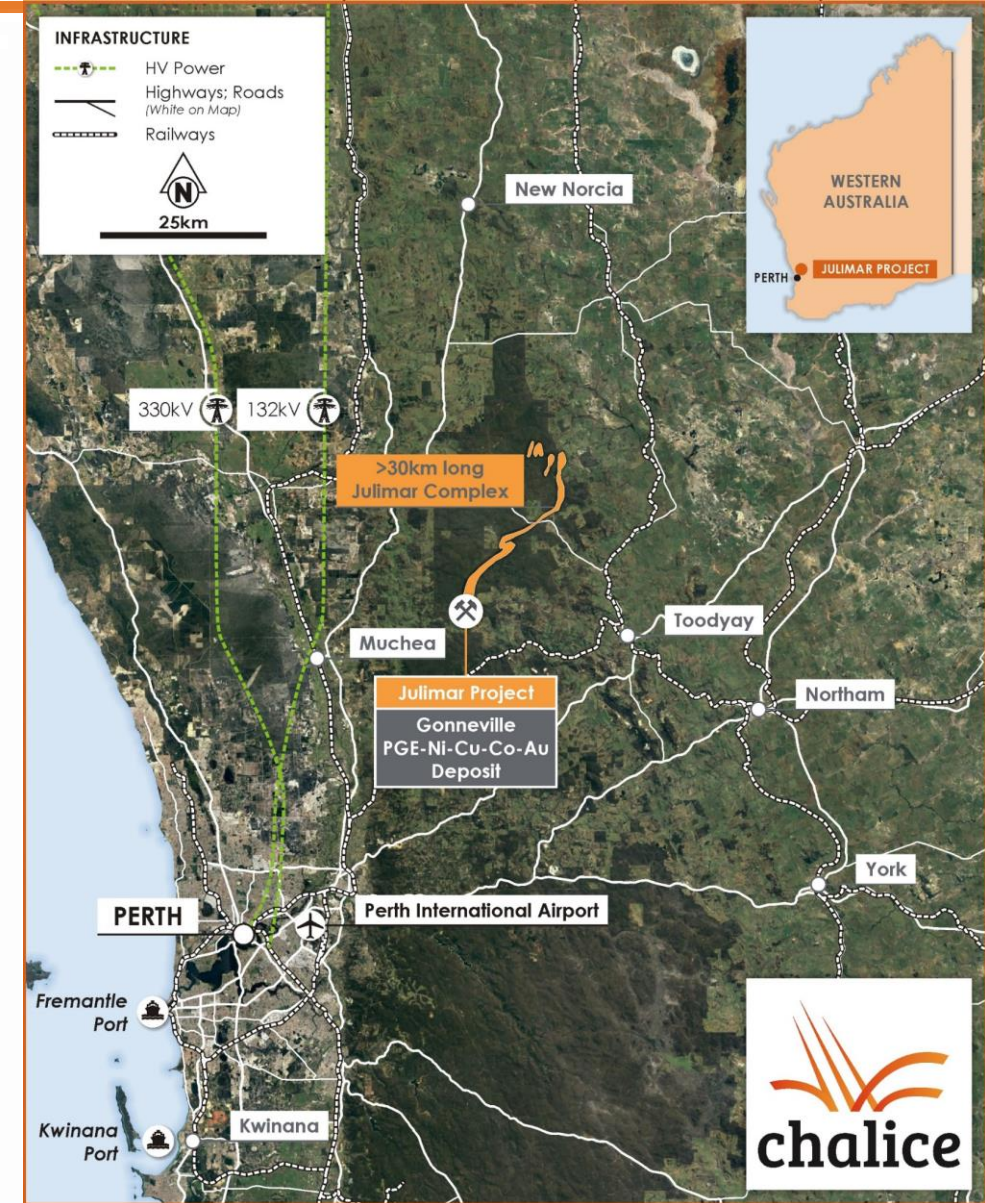

Strategy to explore and develop in parallel; **formal strategic partnering process commenced**

Direct access to **major highway, rail, power, port infrastructure** as well as a **large local workforce**

Resource on Chalice-owned farmland occupies just ~2km of newly recognised **>30km long Julimar Complex**

¹ Refer to full Mineral Resource Statement in Appendix

² 3E = Palladium (Pd) + Platinum (Pt) + Gold (Au)

Julimar is capturing attention as a **strategic asset** for Australia and the western world, given its rare palladium-nickel-cobalt content

Julimar is the **first major PGE discovery in Australia** and one of the few recent large-scale magmatic Ni-Cu-PGE discoveries in the western world

Pd, Pt, Ni and Co are classified as **'critical minerals'** by most western governments

The western world is **extremely reliant on Russian Palladium supply** (~40% of global supply)

Located in one of the **world's most stable and friendly mining jurisdictions** with a commitment to sustainable development

The Australian Government has committed >\$1 billion to **accelerate strategically significant projects** and **strengthen** internal critical mineral **security and supply chains**⁽¹⁾

Strategic partner interest⁽²⁾ in **Julimar's large nickel sulphide endowment** has increased significantly, triggered by the US Inflation Reduction Act (IRA)

Global **Palladium** and **Nickel** Primary Supply Market Share (2021)

Source: 'Provision of PGM market intelligence and long-term metal price forecasts' SFA Oxford, March 2021

'Distribution of mine production of nickel worldwide in 2020*, by country', Statista, February 2022

(1) '2022 Critical Minerals Strategy' Department of Industry, Science, Energy and Resources, Australian Government, March 2022.

(2) Discussions with potential partners are preliminary in nature, a formal partnering process is underway

The need to decarbonise the global economy will underpin long-term demand for the **green metals** at Julimar

Hydrogen

Electric Vehicles

Hybrid Vehicles

Energy Storage

Semi-conductors

Wind & Solar PV

Nickel and Cobalt

- Key industrial and electrification metals with unique chemical properties
- ~3Mt p.a. Ni market, supply dominated by carbon intensive, high environmental impact laterite sources, significant deficit forecast
- ~0.2Mt p.a. Co market, supply dominated by Democratic Republic of Congo with humanitarian challenges

Copper

- Key industrial and electrification metal with high conductivity
- ~26Mt p.a. market, with severe lack of recent large-scale discoveries resulting in a significant deficit forecast

Platinum and Palladium

- Extremely rare (precious) metals with highly versatile catalytic properties, used in emissions reduction technologies such as catalytic converters and in hydrogen electrolyzers and fuel cells
- ~11Moz p.a. Pd market in prolonged deficit, supply dominated by Russia
- ~7Moz p.a. Pt market, supply dominated by South Africa

The Gonneville Resource recently increased by **~50% to ~3Mt NiEq**, confirming the world-class scale and quality of the deposit

Gonneville Resource comparison (Nov-21 to Mar-23)

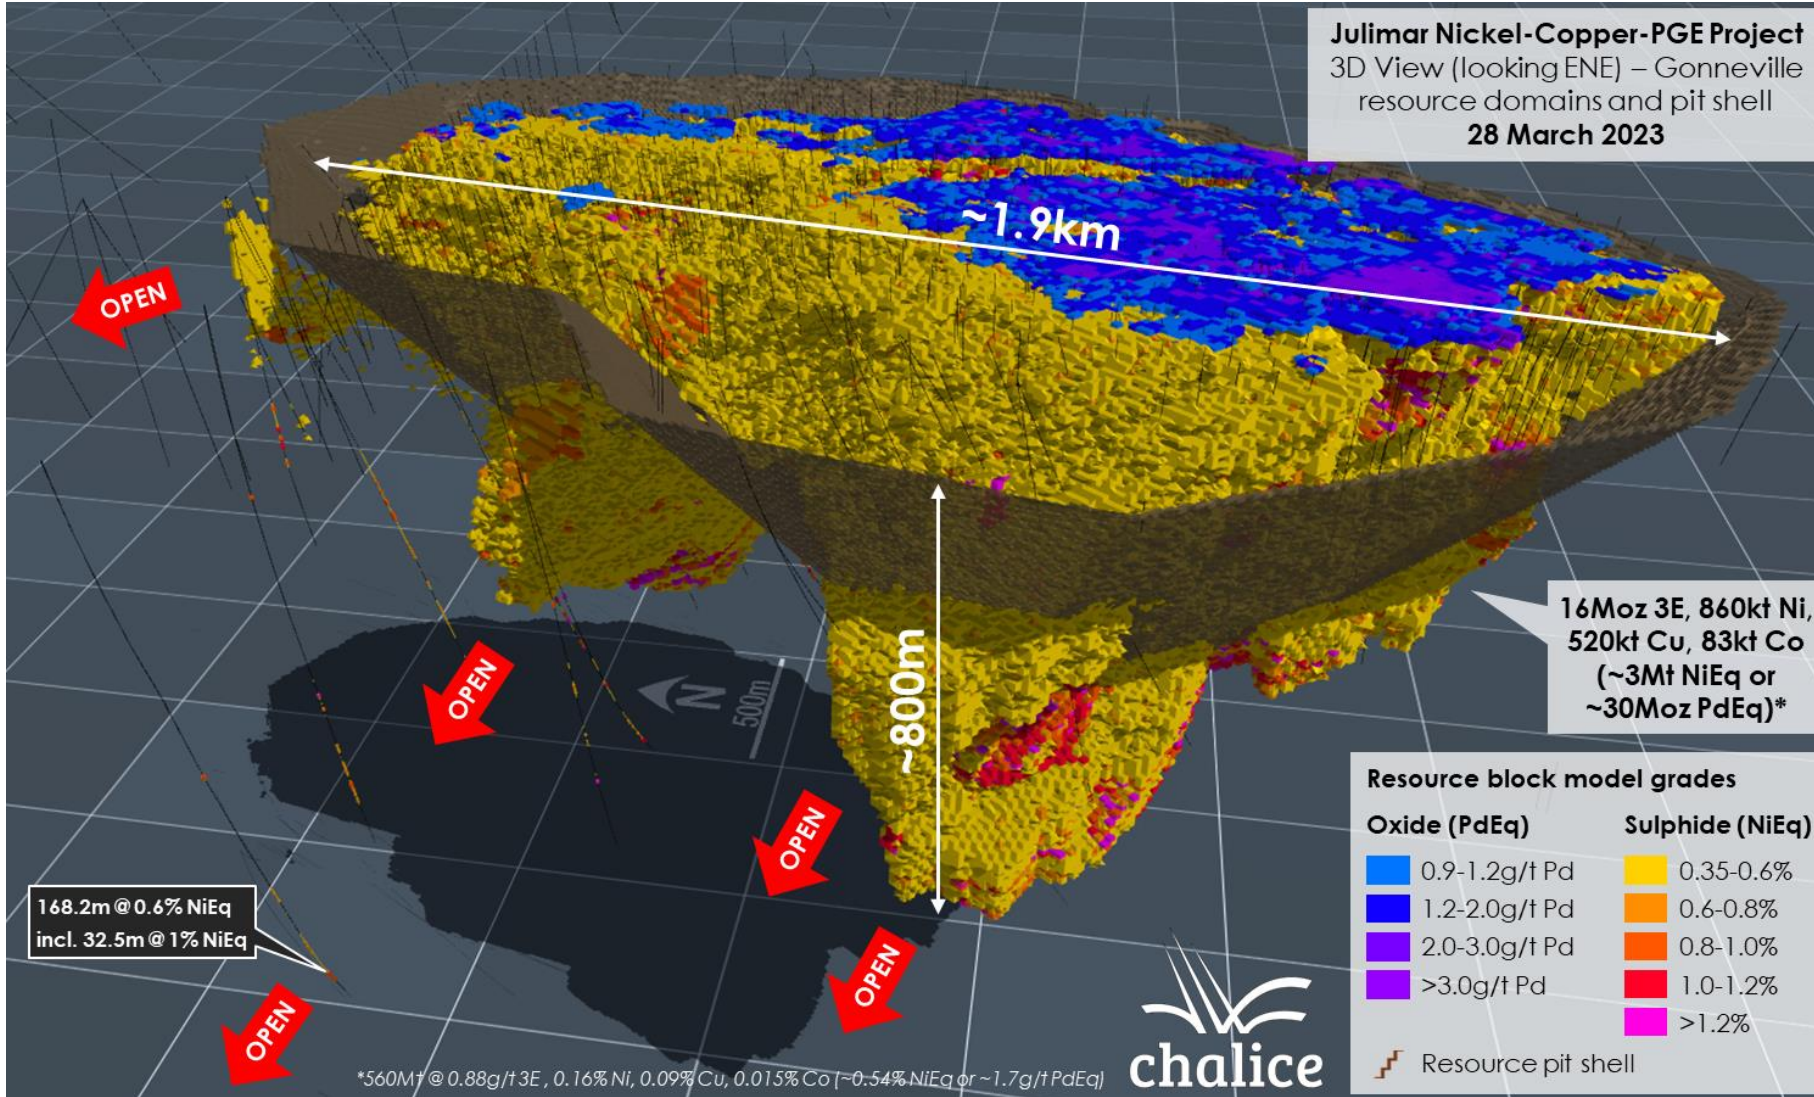

- « An additional **260 drill holes** incorporated in the updated Resource, increasing the contained metal by **~18% in-pit and ~16% in underground category**
- « Additional **~14% increase** driven by slightly reduced open-pit cut-off grade (0.40% NiEq to 0.35% NiEq), based on updated metallurgical and economic inputs
- « **Improved flotation recoveries** still being investigated through flotation tails leaching and staged grinding – work is ongoing and has not been incorporated into this resource update
- « Underground growth driven by **potential for bulk underground mining** (sub level caving) and additional wide-spaced step-out holes.

¹ Refer to full Mineral Resource Statement in Appendix

The **tier-1 scale, near-surface Resource** has high-grade optionality and compelling growth potential

3D view (looking ENE) of Gonneville Resource domains and pit shell

Mineral Resource Estimate¹:

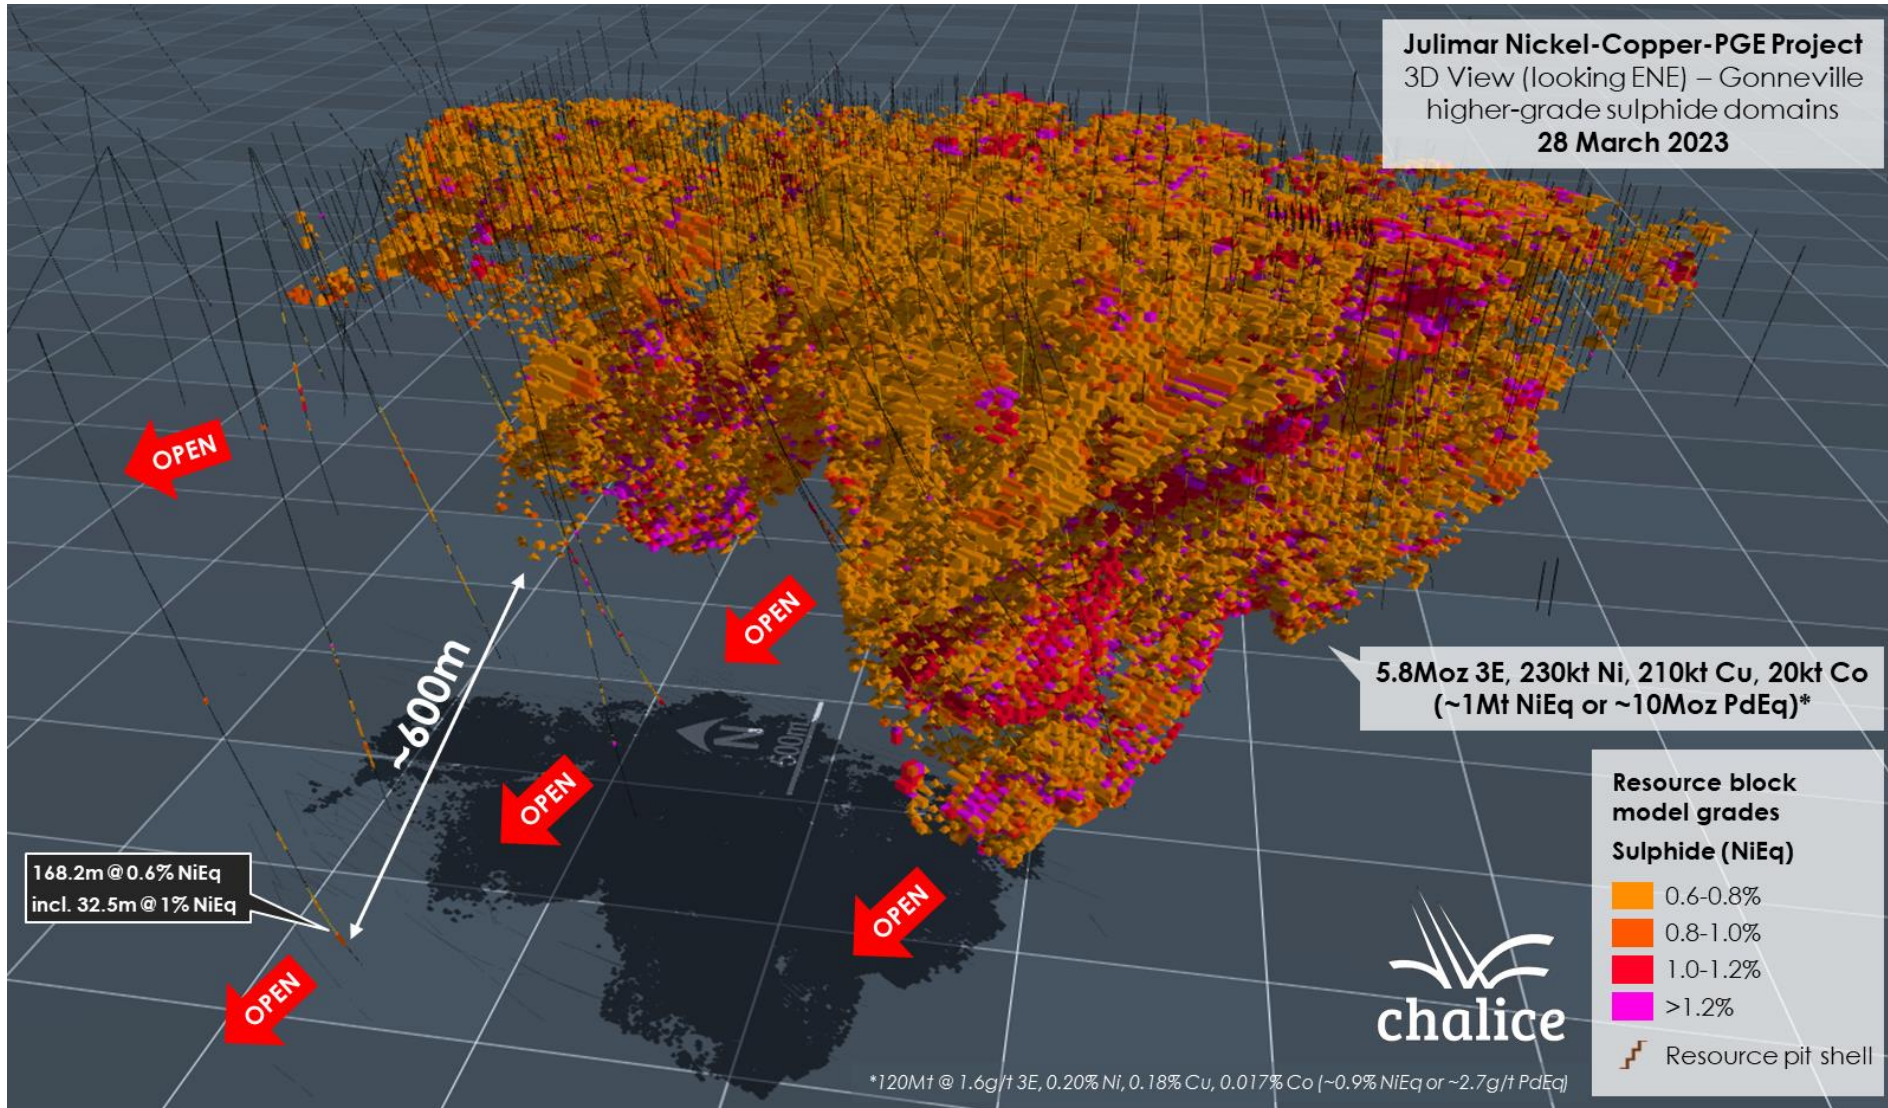

- **560Mt @ 0.88g/t 3E, 0.16% Ni, 0.09% Cu, 0.015% Co (~0.54% NiEq or ~1.7g/t PdEq)**
- **16Moz 3E, 860kt Ni, 520kt Cu and 83kt Co contained**
- Equivalent to **~3.0Mt NiEq** or **~30Moz PdEq** contained
- Resource is defined to depth of ~800m, remains **open at depth**
- Located on **Chalice-owned farmland**
- Resource pit shell has **deepened significantly** at northern end of deposit
- Strip ratio in-pit of 1.6

¹ Refer to full Mineral Resource Statement in Appendix

The higher-grade sulphide component of the Resource **starts near surface** and remains the focus of studies evaluating the initial development phase

3D view (looking NE) of Gonneville high-grade sulphide Resource domains (>0.6% NiEq) and pit shell

Higher-grade sulphide component of Resource¹:

- **120Mt @ 1.6g/t 3E, 0.20% Ni, 0.18% Cu, 0.017% Co (~0.9% NiEq or ~2.7g/t PdEq);**
- 5.8Moz 3E, 230kt Ni, 210kt Cu, 20kt Co (~1.0Mt NiEq or ~10Moz PdEq) contained
- This higher-grade component affords the project **significant optionality in development**
- Evidence of continuation of high-grade sulphide zones ~600m beyond limit of updated Resource

¹ Refer to full Mineral Resource Statement in Appendix

Julimar has the **second largest** undeveloped nickel sulphide resource in Australia and has significant PGE-Cu-Co credits

Australian primary nickel sulphide resources in exploration or development ¹

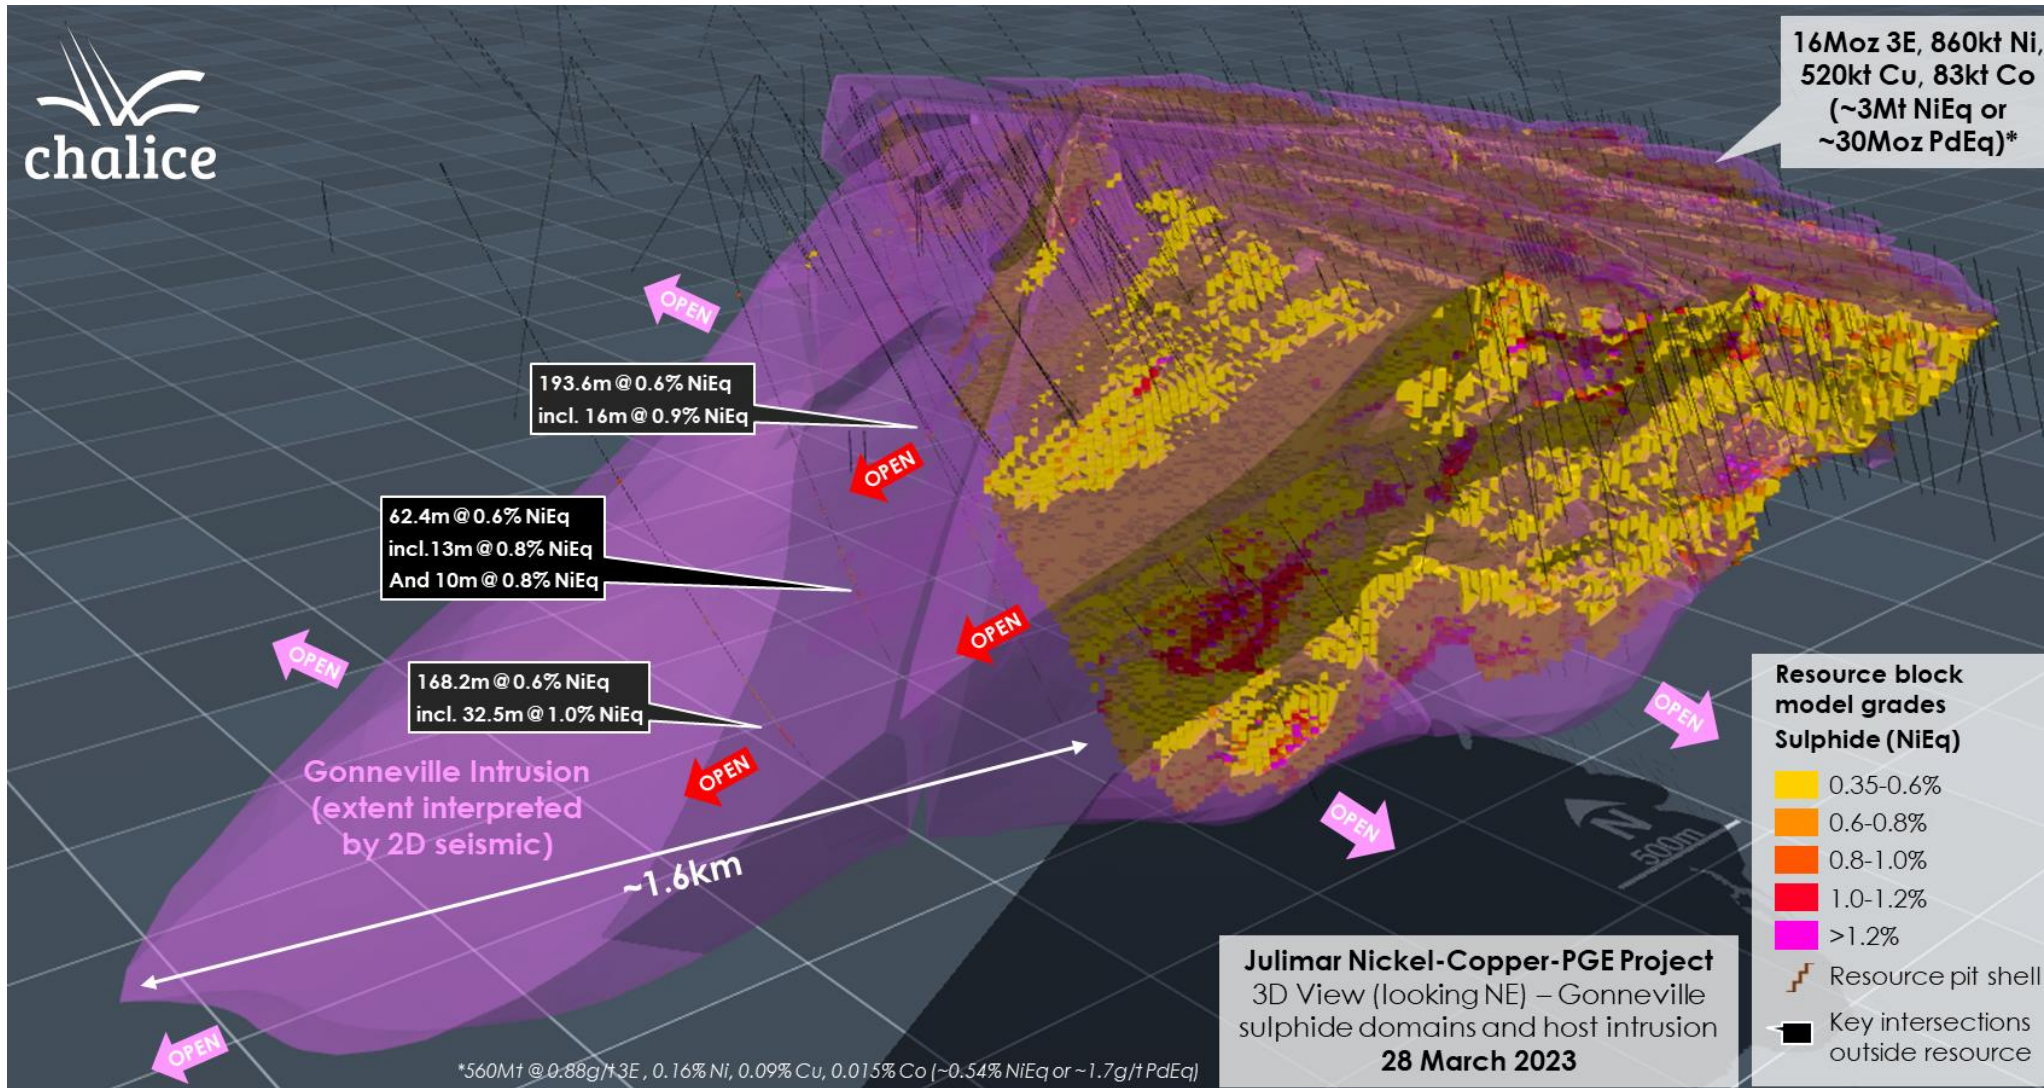

Source: Company filings.

1: Based on total reported JORC Resource (Measured, Indicated, and Inferred). Includes all exploration and development projects with a contained Ni resource of over 99kt. Please refer to Appendix [Australian Primary Nickel Sulphide Resources slide] for peer comparison information; [Gonneville Mineral Resource Estimate slide] and [Metal equivalent assumptions slide] for the assumptions used for the calculation of metal equivalents.

The Resource remains **open down-dip**, with ongoing drilling demonstrating potential for material growth on farmland

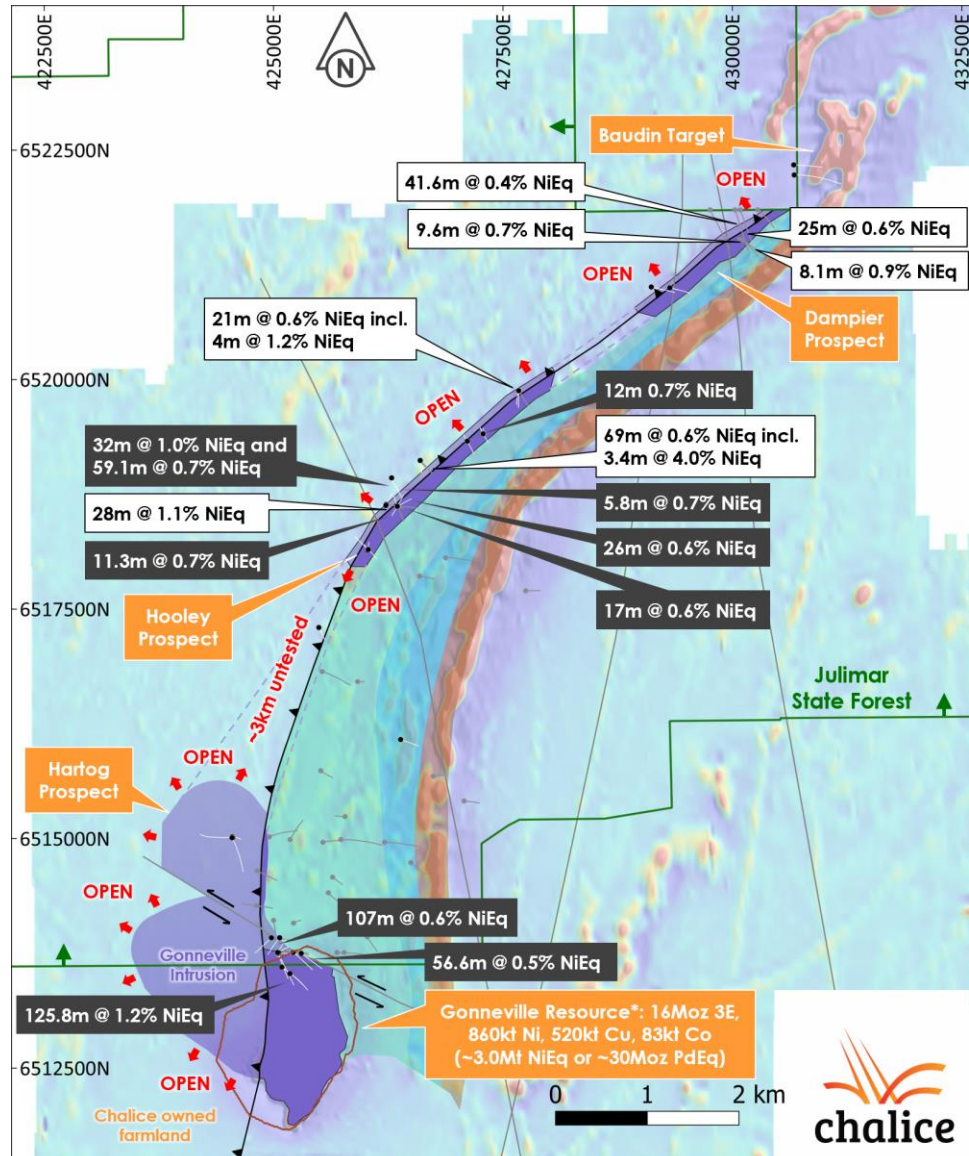

3D view (looking NE) of Gonneville sulphide resource domains and host intrusion

- The **500-600m thick** host Intrusion is interpreted to extend a further **~1.6km down-dip** to the west beyond the Resource
- Disseminated sulphide mineralisation is **consistent within the host intrusion**, with localised higher-grade sulphide zones plunging to the north-west
- **Wide-spaced drilling continues with 2 diamond drill rigs** to test for high-grade extensions

¹ Refer to full Mineral Resource Statement in Appendix

Mafic-ultramafic geology + magmatic sulphides have been intersected over a **strike length of ~10km** across the Julimar Complex

- ▲ State Forest boundary
 - DDH – New Assays
 - DDH – Previously reported
 - Gonneville Resource pit crest
 - Previous key intersection
 - New intersection
- Geology Interpretation**
- Julimar Complex (at surface)
 - Julimar Complex (at depth)
 - Greenstone Sequence
 - Other Mafic-Ultramafic
 - Banded Iron Formation
 - ▲ Hanging Wall Structure
 - Other Structures

*560Mt @ 0.88g/t 3E, 0.16% Ni, 0.09% Cu, 0.015% Co

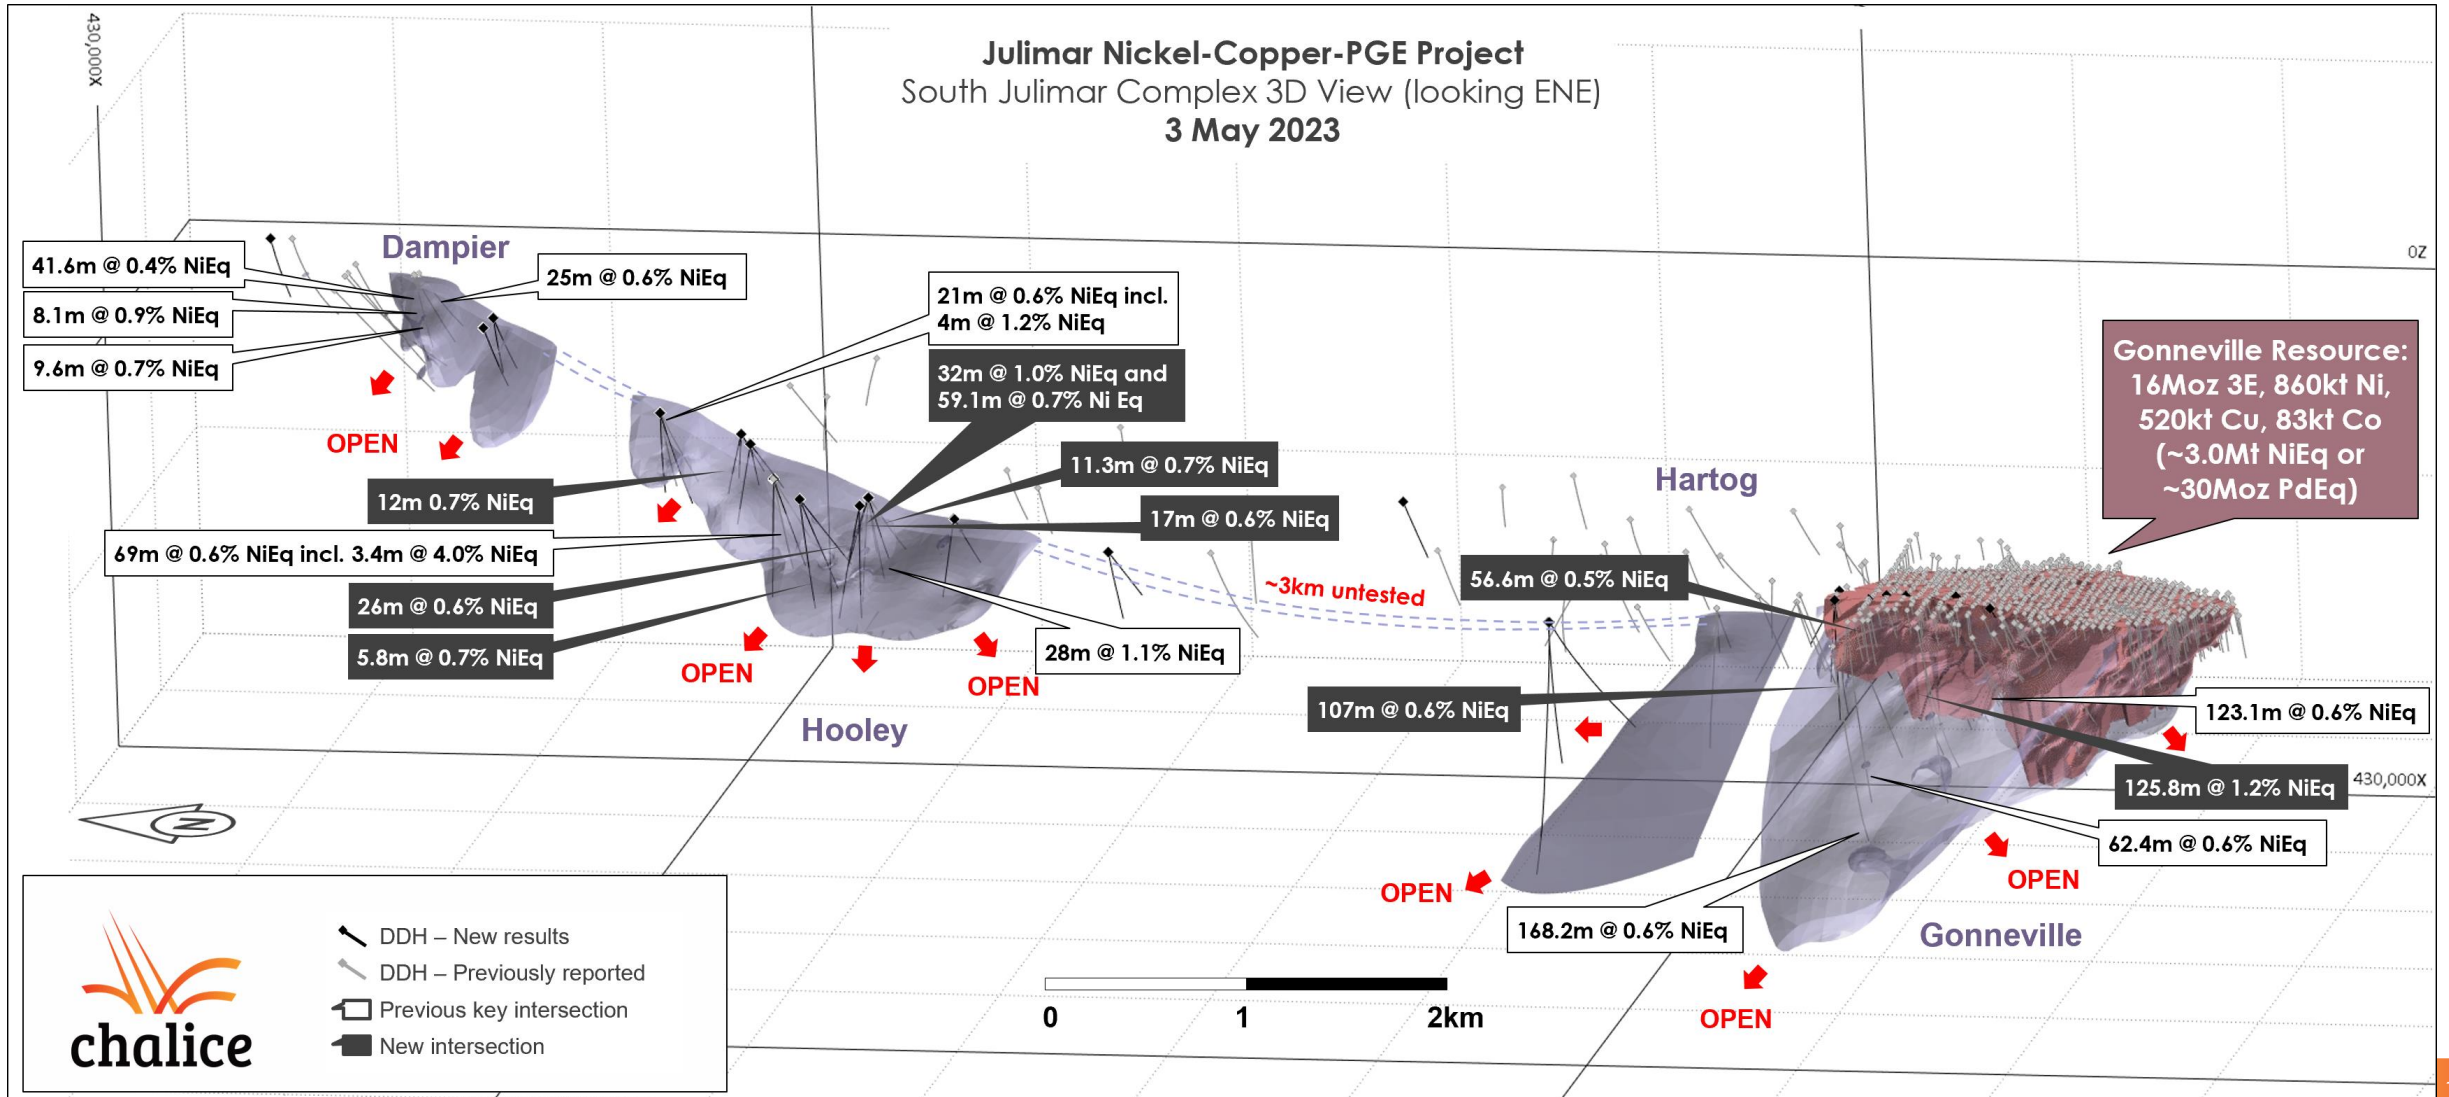

Julimar Nickel-Copper-PGE Project
 South Julimar Complex Plan View – Drill holes, geology, over magnetics (TMI-RTP)
 3 May 2023

- 2D seismic and drilling to date supports interpretation of the Julimar Complex having a rare chonolith-like geometry, similar to other major mineral systems like **Norilsk-Talnakh** (Russia) and **Jinchuan** (China)
- Drilling **6-10km** further north of Gonneville has continued to intersect the same prospective mafic-ultramafic geology (the Julimar Complex) and magmatic sulphide mineralisation over **~5.5km of strike length**
- Wide-spaced reconnaissance drilling continues with **2 diamond drill rigs**
- Planning is underway for additional exploration drilling at Hooley as well as initial drilling at the Baudin-Janzs-Torres targets on existing access tracks in **Q3 2023**
- **Exploration targeting new high-grade Ni-Cu-PGE deposits** will continue in parallel to development studies for a potential mine at Gonneville on Chalice-owned farmland

Several large sections of the Julimar Complex **remain untested** and recent deeper drilling indicates a thickening of the Complex at depth

South Julimar Complex 3D View (looking ENE) – drill holes (down-hole widths quoted) and Julimar Complex intrusive geology

The current Resource occupies just ~2km of the **>30km long Julimar Complex** – the upside to the north presents a truly unique opportunity

3D view (looking NW) of the Julimar Complex, Gonneville Deposit, regional targets, soil geochemistry over magnetics

Julimar Complex

- Interpreted >30km long mafic-ultramafic intrusive complex
- Prospective for high-grade magmatic Ni-Cu-PGE sulphides

Flinders Target (untested)

- Large coincident Mag-AEM anomaly
- Access pending

~18km Baudin-Jansz-Torres strike length (untested)

- Large EM and Ni-Cu-PGE soil anomalies
- Drilling access pending (targeting Q3 2023)

~10km Hartog-Dampier strike length (drilling underway)

- >110 diamond holes drilled to date
- Potential for several discrete Ni-Cu-PGE deposits

Gonneville Deposit (Resource stage)

- Discovery hole (JRC001): 19m @ 9.6g/t 3E, 2.6% Ni, 1.0% Cu, 0.1% Co from 48m
- 16Moz 3E, 860kt Ni, 520kt Cu and 83kt Co* contained
- >1,000 RC/diamond holes drilled across ~1.9km x 1.4km area – open at depth

*560Mt @ 0.88g/t Pd+Pt+Au (3E), 0.16% Ni, 0.09% Cu, 0.015% Co

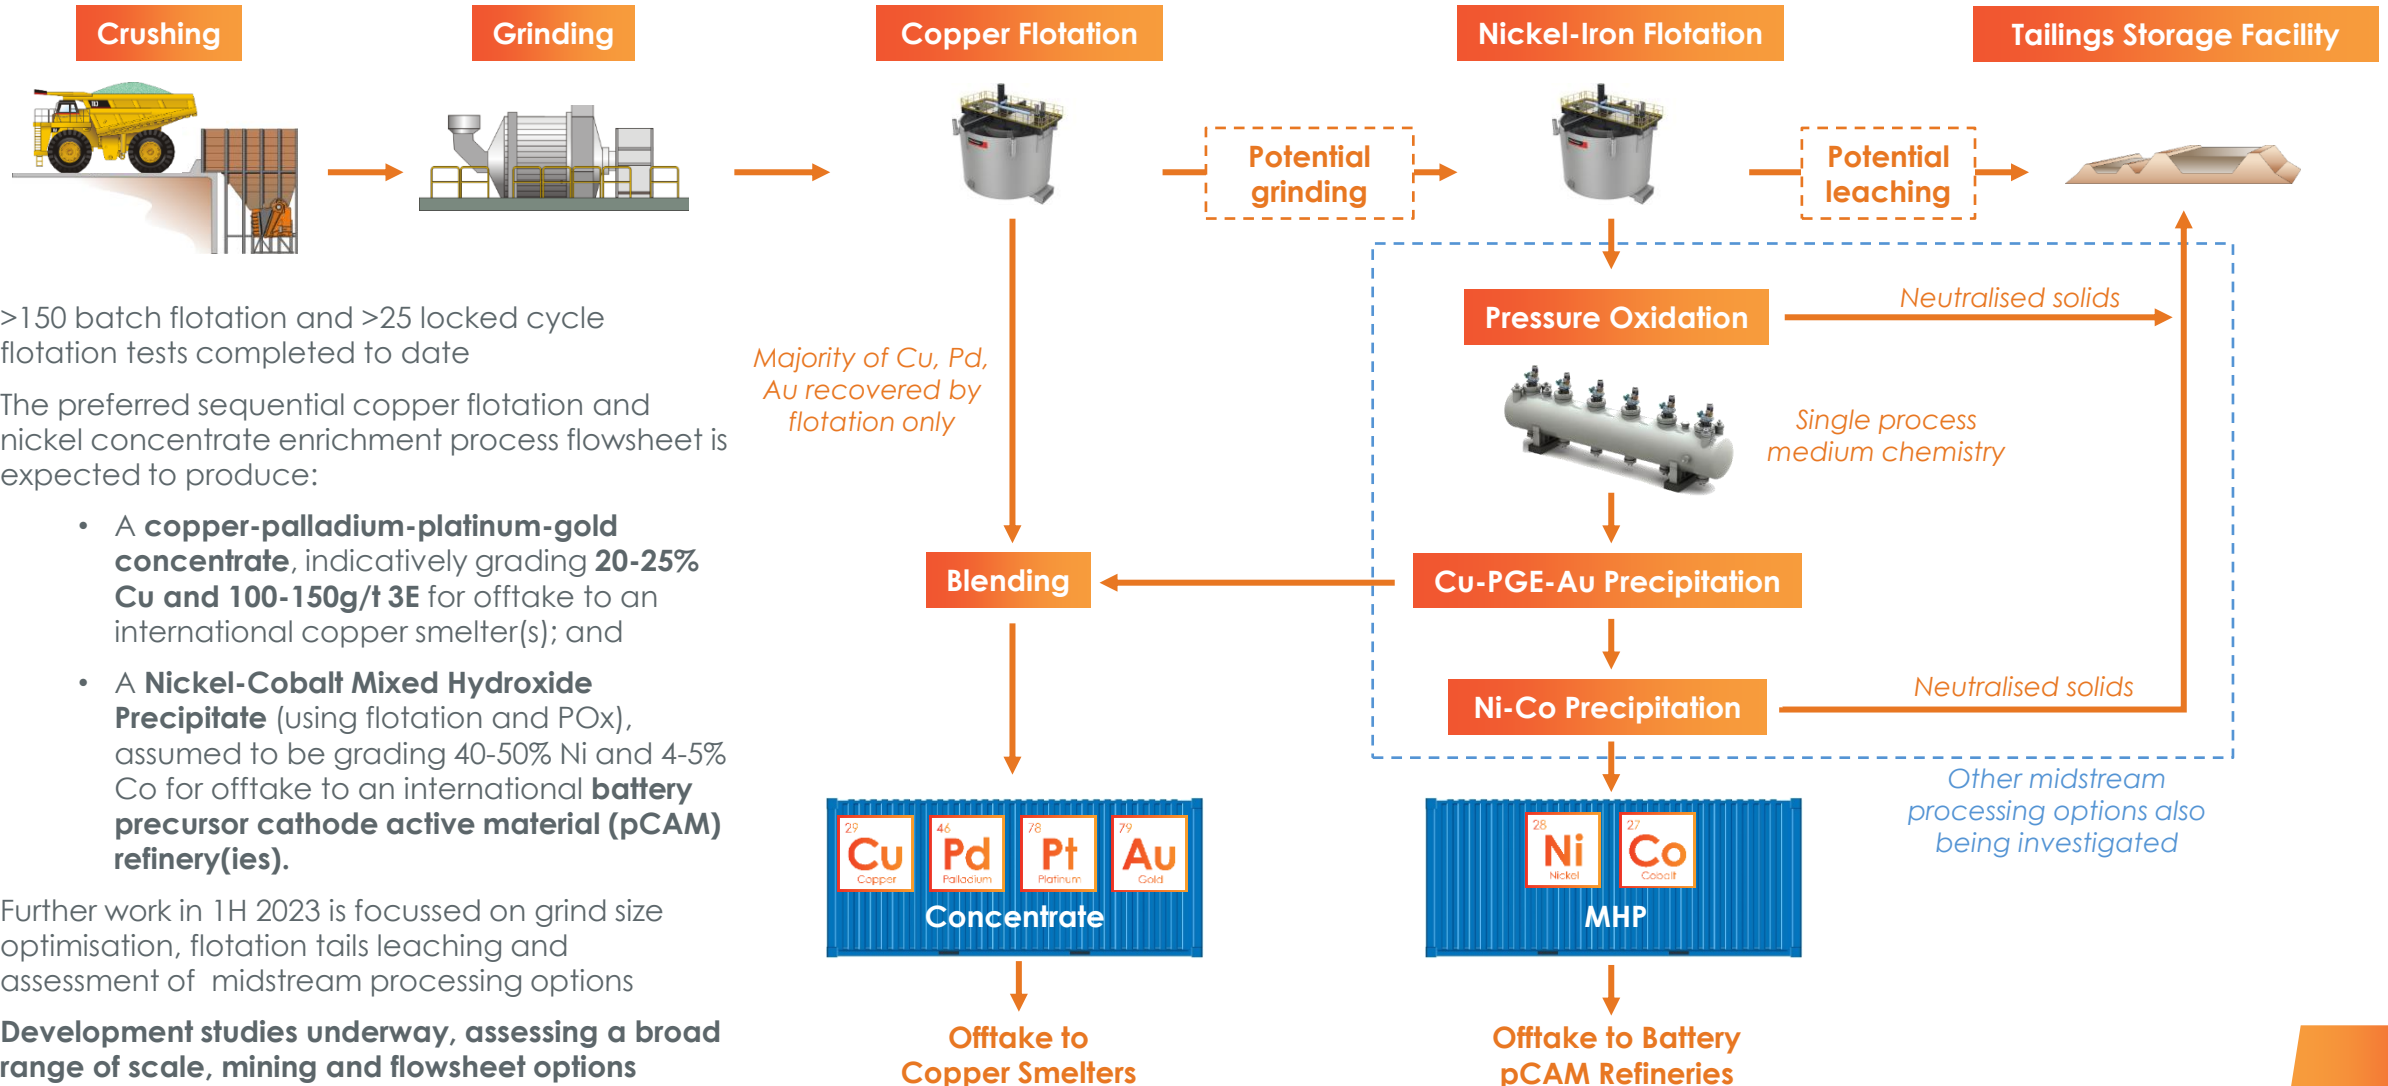

Legend:

- >5ppb Pd in soil
- >700ppm Cr in soil
- >80ppm Ni in soil
- >20ppm Cu in soil
- ▲ State Forest boundary

The processing flowsheet is under development, targeting production of a **Cu-PGE-Au concentrate** and a **battery-grade Ni-Co MHP**

Julimar Processing Flowsheet (simplified)

- >150 batch flotation and >25 locked cycle flotation tests completed to date
- The preferred sequential copper flotation and nickel concentrate enrichment process flowsheet is expected to produce:
 - A **copper-palladium-platinum-gold concentrate**, indicatively grading **20-25% Cu** and **100-150g/t 3E** for offtake to an international copper smelter(s); and
 - A **Nickel-Cobalt Mixed Hydroxide Precipitate** (using flotation and POx), assumed to be grading 40-50% Ni and 4-5% Co for offtake to an international **battery precursor cathode active material (pCAM) refinery(ies)**.
- Further work in 1H 2023 is focussed on grind size optimisation, flotation tails leaching and assessment of midstream processing options
- **Development studies underway, assessing a broad range of scale, mining and flowsheet options**

Exploration drilling along the Julimar Complex and strategic partnering on Gonneville represent **significant upcoming milestones**

Chalice continues its **multi-track value creation strategy** at Julimar – continue initial exploration to determine the full scale of the mineral system, advance development studies and progress regulatory approvals for a potential mine at Gonneville (located on Chalice-owned farmland) and complete a strategic partnering process for the development of Gonneville...

... in addition, province scale exploration is ramping up across the new West Yilgarn Ni-Cu-PGE Province

¹ Refer to full Mineral Resource Statement in Appendix. Timeline is indicative and subject to exploration and study outcomes

Chalice is committed to **strong environmental stewardship** and has established **trust based relationships** with local communities and Traditional Owners

We have adopted a **Biodiversity goal** for the Julimar Project – to ensure science-based **no net loss of species or habitat diversity** as a result of our operations

Delivering the Biodiversity Strategy A detailed implementation plan is under development targeting:

Connectivity Establish ecological corridors

Restoration to address habitat fragmentation

Regeneration Improve carbon sequestration

Leading practice low-impact exploration

- Strictly governed by a Conservation Management Plan, according to industry best practice
- Track mounted rigs with a small footprint and no mechanised clearing of vegetation
- Flora, fauna and cultural heritage monitoring is conducted prior to each mobilisation to site

Science-based environmental management

- Comprehensive baseline environmental surveys across 6,000ha; covering flora, fauna, and dieback
- Baseline water studies underway; Chalice recognises water is a shared resource

A mine at Julimar could deliver significant **jobs, skills and economic diversification** to the Wheatbelt region of WA

Creating lasting social and economic benefits

- ~\$1.2M local procurement and investment by Chalice, plus ~\$1.5M spend by direct contractors in the local shires surrounding the Julimar Project in FY22
- Chalice has engaged early, actively and transparently to build respectful and collaborative relationships with stakeholders

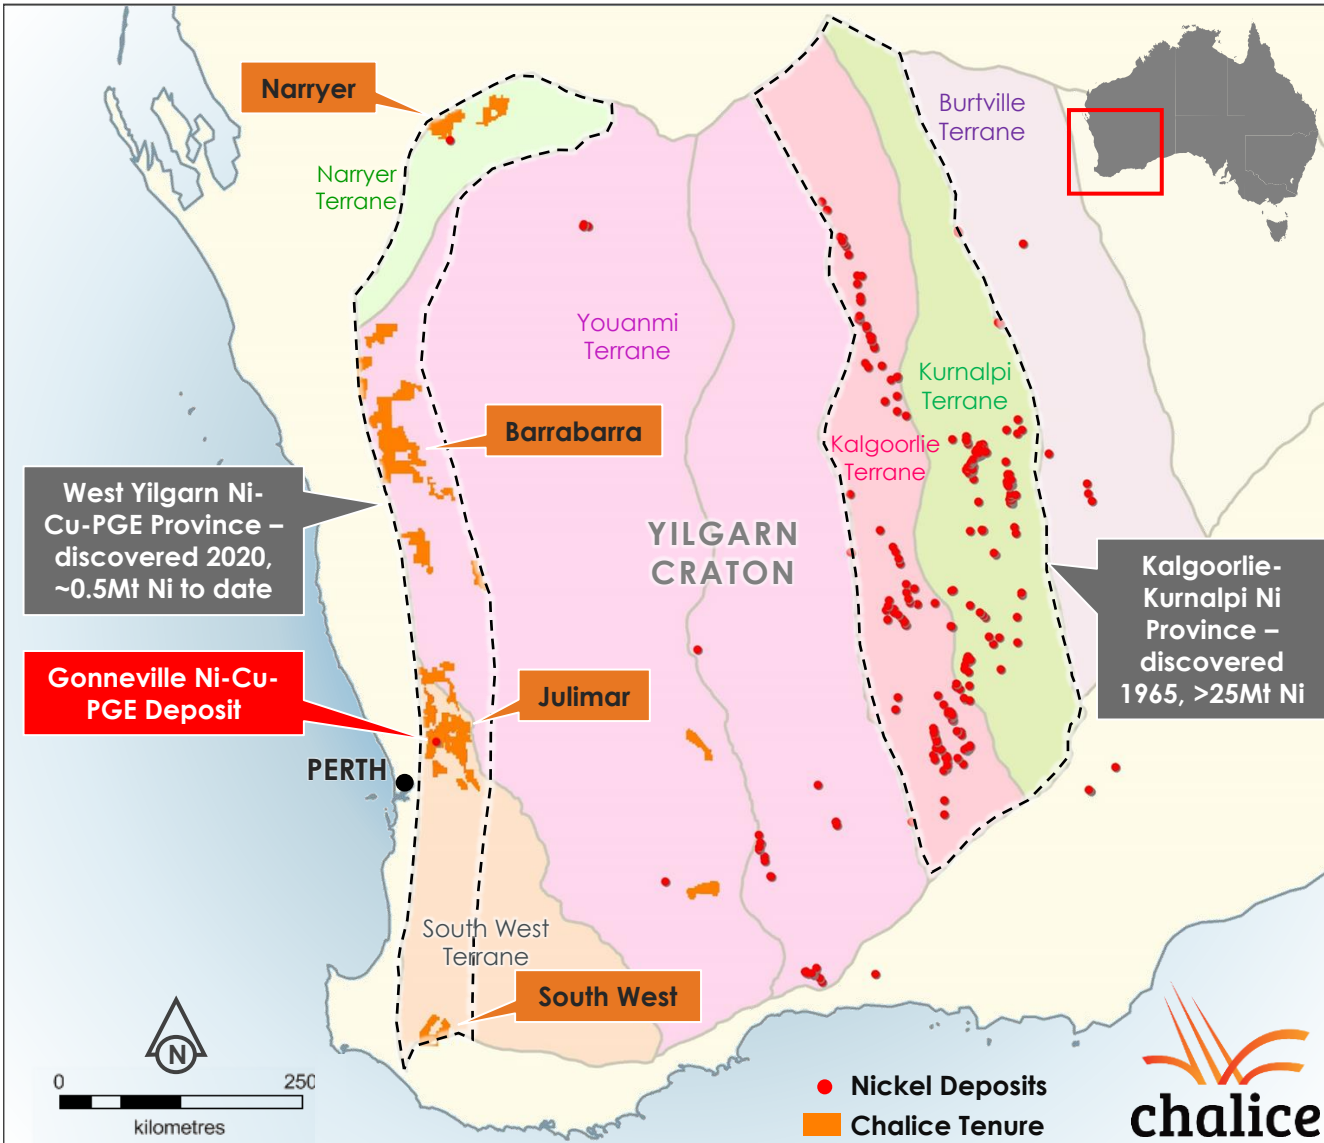

Building **strong, collaborative relationships** with Whadjuk and Yued Traditional Owners

Actively engaging to protect cultural heritage values

- Whadjuk and Yued have started a program of cultural heritage surveys and monitoring for the Julimar Project
- In 2022 over **60 Traditional Owners** participated in this work

The Julimar discovery has kick-started the new West Yilgarn Ni-Cu-PGE Province, which could deliver **more major critical mineral discoveries**

- Many of the **'giant' ortho-magmatic nickel-copper-PGE sulphide** deposits (Norilsk, Jinchuan, Thompson and Voisey's Bay, etc) are located proximal to the margin of cratons
- ~1,200km long western margin of the Yilgarn presents a **similar geological setting, but is almost entirely unexplored**
- Eastern Yilgarn craton hosts several world-class nickel sulphide deposits – over **25Mt of Ni** discovered since 1965
- Chalice made the first major ortho-magmatic Ni-Cu-PGE discovery in the West Yilgarn, subsequently staking **>8,000km²**
- Chalice has **'first mover' advantage** in this exciting new province – strong potential to deliver more major Ni-Cu-PGE discoveries

- **Hundreds of potential host intrusions** already identified
- Rapid, low-cost exploration approach being used – EM, soil/auger sampling and shallow reconnaissance drilling
- **Six new drill-ready greenfield targets defined** – initial drilling planned to commence in **Q4 2023**
- Potential for **highly variable** mineralisation styles (Ni:Cu:PGE metal ratios) across the province
- **The prize is significant** – i.e. **Julimar discovery zone massive sulphides grading c. 3.2% Ni, 1.2% Cu, 10g/t 3E**

The fate of decarbonisation rests on the explorers who must find the green metals – **the big discoveries are very rare**

Number of base metal (Ni, Cu, Zn, Pb) discoveries in the World by size – 1900-2021

Source: MinEx Consulting © February 2023

Note: "Moderate" >10kt Ni, >100kt Cu, >300kt Zn+Pb; "Major" >100kt Ni, >1Mt Cu, >3Mt Zn+Pb; "Giant" >1Mt Ni, >5Mt Cu, >12Mt Zn+Pb. Excludes unreported discoveries in recent years

Highlights

World class, tier-1 scale green metals project in Western Australia – unique exposure to critical metals required for decarbonisation

A team with a **track record of discovery and shareholder value creation**

Significant exploration upside at Julimar and in the exciting new West Yilgarn Ni-Cu-PGE Province

Chalice is actively growing its organisational capability

Board of Directors

Derek La Ferla, Chairman

- Highly regarded ASX200 chair and company director with 30+ years experience as a corporate lawyer
- Chair of Poseidon Nickel and formerly Chair of Sandfire Resources

Alex Dorsch, Managing Director and Chief Executive Officer

- Diverse experience in consulting, engineering and corporate advisory in the energy and resources sectors
- Previously a Specialist consultant with McKinsey & Company

Morgan Ball, Non-Exec Director

- Chartered Accountant with 25+ years experience in the resources, logistics and finance industries
- Formerly CFO of Northern Star Resources and Saracen Mineral Holdings

Garret Dixon, Non-Exec Director

- 30+ years experience in resources and mining contracting sectors
- Formerly Executive VP Alcoa & President Bauxite

Stephen McIntosh, Non-Exec Director

- Highly regarded mining executive with 30+ years experience in exploration, major project studies and execution
- Formerly Group Executive and Head of Exploration & Development Projects at Rio Tinto

Linda Kenyon, Non-Exec Director

- Corporate lawyer and senior executive with 30+ years experience
- Formerly Company Secretary and member of Executive Leadership Team at Wesfarmers

Jo Gaines, Non-Exec Director

- Extensive experience in intergovernmental negotiations and stakeholder engagement
- Chair of the Government Employees Superannuation Board (GESB) and a Director of Development WA

Management

Richard Hacker, GM Strategy and Commercial

- Chartered Accountant with 20+ years experience in resource company financing, corporate and commercial management
- Previously Company CFO since 2006

Dr Kevin Frost, GM Discovery and Growth

- Co-recipient of PDAC 2023 Thayer Lindsley Award and AMEC's 2022 Prospector of the Year Award for the Julimar discovery, and previously in 2009 for the discovery of the Spotted Quoll nickel sulphide deposit in WA (Western Areas)

Bruce Kendall, GM Exploration

- Co-recipient of AMEC's Prospector of the Year Award in 2012 for the discovery of the world-class Tropicana gold deposit in WA (AngloGold Ashanti)

Dr Soolim Carney, GM Environment and Community

- Environment, health and safety, indigenous affairs, govt relations and community specialist with 20+ years experience
- Former Regional Environment Manager for Alcoa Australia

Mike Nelson, GM Project Development

- 30+ years experience in operational and technical leadership roles
- Instrumental in leading several mega-projects for mining internationals including Barrick Gold and Teck Resources

Chris MacKinnon, CFO

- Qualified accountant and lawyer with 15+ years experience of professional and corporate experience in the energy and resources industry

Jamie Armes, Company Secretary

- Chartered Accountant with 20+ years experience within the accounting profession and administration of public listed companies in the mining and exploration industry

2023

2007
Chalice & Higginsville Projects sold for ~A\$12M (pre-tax)

2009-2011
~A\$43M raised to progress Zara to DFS

2013
Cameron Gold Project in Ontario acquired for ~A\$8M

2017
Acquired East Cadillac Gold Project in Quebec and staked Pyramid Hill Gold Project in Victoria

2018
A\$0.04ps / ~A\$10.6M capital return to shareholders

2019
Quebec Gold Projects sold to O3 Mining

2020
~\$145M raised to progress Julimar

2021
Tier-1 maiden Gonneville Resource

2022
Upgraded Gonneville Resource #2

The growing battery industry needs new, large scale and sustainable sources of battery-grade nickel – **a unique opportunity for Julimar**

Battery-grade nickel consumers forecast to become heavily reliant on supply sources that **do not meet sustainability standards**, i.e. NPI

With **860kt of contained nickel** defined to date, Julimar has the potential to become a globally significant source of class 1 nickel, which has a much lower carbon footprint than other sources

Julimar's proximity to WA's **world class power grid and infrastructure** make it uniquely positioned to deliver low carbon intensity metals

Class 1 nickel sources are likely to **demand a premium**, driven by the need to comply with emissions targets and to satisfy increasing sensitivity to sustainability standards

Estimated average carbon intensity of nickel sources (kgCO₂ eq. per kg Ni)

Platinum and Palladium are essential in every stage of the hydrogen value chain, a critical solution to **achieving net-zero carbon emissions**

Production

Green hydrogen produced by electrolysis of water using renewable energy (wind, solar, hydro)

PGEs are essential catalysts in the Proton Exchange Membrane (PEM) Electrolyser

Transport and Storage

Long-term storage and transport of green hydrogen likely to be achieved using liquified ammonia (NH_3) as carrier

Pd is an essential catalyst in hydrogen-ammonia conversion and purification

Utilisation

Green hydrogen ideal for use in green steel and Fuel Cell Electric Vehicles (FCEVs), likely to be the dominant technology for heavy transport such as trucks, trains and ships

PGEs are essential catalysts in most hydrogen fuel cell designs

The rapidly growing and increasingly adopted hydrogen economy has the potential to **underpin long term PGE demand**

Current **primary supply of Pt and Pd is ~16Moz p.a.** Pd is in prolonged deficit while Pt in surplus

Our view is that with **conservative hydrogen adoption**, demand for Pt and Pd from hydrogen could be as high as **~8Moz p.a.**⁽¹⁾

A modest hydrogen adoption scenario includes **~10% share** of light vehicle market, **~40% share** of heavy vehicle market, and **50-70GW** of electrolyser capacity by 2040

Projections do not include PGE usage from hydrogen applications in **shipping, aviation, industrial or steel manufacturing**

European Union forecasts a **970x increase in PGM demand from hydrogen by 2050**⁽²⁾

Estimated Annual Pt and Pd Demand from Hydrogen (Moz)

(1) Cautionary statement: The forward-looking statements have been estimated by Chalice using assumptions that have been informed by third party research. These statements are based on an assessment of economic and operating conditions and on various assumptions regarding future events and actions that, as at the date of this presentation, are considered reasonable by Chalice. Refer to slide 28 "Long Term PGE Demand Forecast" for additional information regarding the underlying assumptions and calculation methodology, and Slide 2 for a statement regarding the risks involved in forward-looking statements of this nature. Without limiting these risks, such forward-looking statements are predictive in character, may be affected by incorrect assumptions or by known or unknown risks and uncertainties, and may differ materially in due course. Investors are therefore cautioned against attributing undue certainty to forward-looking statements, including those outlined above. **(2)** European Union's Critical Raw Materials Act, Mar 2023.

Long term PGE demand forecast: supporting assumptions & calculations

The long term PGE demand impact from the Hydrogen economy have been generated by Company analysis using assumptions and forecasts that have been informed by recent third party research. The assumptions used below relate to the year 2040. Note: There is the potential risk that these projections will not be achieved should the adoption of a hydrogen economy be less than expected or if major technological developments reduce the PGE loadings required for electrolyzers and fuel cells.

Key Model Inputs (2040)

Technology	Input	Unit	Assumption	PGE Demand Calculation
PEM electrolyser	Capacity	GW	70	$70 \times 75\% \times 0.5 / 31.1^{(1)} = \sim 0.8\text{Moz}$
	Market share	%	75	
	PGE loading	g/kW	0.5	
Light Vehicles	Light vehicle market	million per annum	100	$100 \times 12\% \times 80 \times 0.13 / 31.1^{(1)} = \sim 4.0\text{ Moz}$
	Light FCEV market share	%	12	
	Light vehicle rating	kW	80	
	PGE loading	g/kW	0.13	
Heavy Vehicles	Heavy vehicle market	million per annum	7	$7 \times 40\% \times 250 \times 0.13 / 31.1^{(1)} = \sim 2.9\text{ Moz}$
	Heavy FCEV market share	%	40	
	Heavy vehicle rating	kW	250	
	PGE loading	g/kW	0.13

Note some numerical differences may occur due to rounding to 2 significant figures.

This higher-grade component is contained within the reported global Mineral Resource.

PdEq oxide (Palladium Equivalent g/t) = Pd (g/t) + 1.27x Au (g/t)

NiEq sulphide (Nickel Equivalent %) = Ni (%) + 0.32x Pd(g/t) + 0.21x Pt(g/t) + 0.38x Au(g/t) + 0.83x Cu(%) + 3.00x Co(%)

PdEq sulphide (Palladium Equivalent g/t) = Pd (g/t) + 0.67x Pt(g/t) + 1.17 x Au(g/t) + 3.11x Ni(%) + 2.57x Cu(%) + 9.33x Co(%)

Underground resources are outside the pit above a 0.40% NiEq cut off grade based on sub-level caving mining method

Includes drill holes drilled up to and including 11 December 2022.

Metal equivalent assumptions of Gonneville Resource, 28 March 2023

Based on metallurgical testwork completed to date for the sulphide domain, it is the Company's opinion that all the quoted elements included in metal equivalent calculations (palladium, platinum, gold, nickel, copper and cobalt) have a reasonable potential of being recovered and sold.

Only limited samples have been collected from the transitional zone due to its relatively small volume. Therefore, the metallurgical recovery of all metals in this domain are unknown. However, given the relatively small proportion of the transition zone in the Mineral Resource, the impact on the metal equivalent calculation is not considered to be material.

Metal equivalents for the transitional and sulphide domains are calculated according to the formula below:

- $NiEq\% = Ni (\%) + 0.32x Pd(g/t) + 0.21x Pt(g/t) + 0.38x Au(g/t) + 0.83x Cu(\%) + 3.00x Co(\%)$;
- $PdEq(g/t) = Pd (g/t) + 0.67x Pt(g/t) + 1.17x Au(g/t) + 3.11x Ni(\%) + 2.57x Cu(\%) + 9.33x Co(\%)$

Metal recoveries used in the metal equivalent calculations are based on rounded average Resource grades for the sulphide domain (>0.35% NiEq cut-off):

- Pd – 60%, Pt – 60%, Au – 70%, Ni – 45%, Cu – 85%, Co – 45%.

Metal prices used are consistent with those used in the Whittle pit optimisation (based on long term consensus analyst estimates):

- US\$1,800/oz Pd, US\$1,200/oz Pt, US\$1,800/oz Au, US\$24,000/t Ni, US\$10,500/t Cu and US\$72,000/t Co.

Initial metallurgical testwork indicates that only palladium and gold are likely to be recovered in the oxide domain, therefore no NiEq grade has been quoted for the oxide. The PdEq grade for the oxide has been calculated using the formula:

$PdEq\ oxide\ (g/t) = Pd\ (g/t) + 1.27 \times Au\ (g/t)$.

- Metal recoveries based on limited metallurgical test work completed to date:
 - Pd – 75%, Au – 90%.
- Metal prices used are consistent with those used in the pit optimisation:
 - US\$1,800/oz Pd, US\$1,800/oz Au

For additional information on the assumptions used in the calculation of metal equivalents, refer to the ASX announcement titled “Gonneville Resource increases by approx. 50% to 3Mt NiEq”, dated 28 March 2023.
